What is ESG?

ESG is on the minds of many investors today. It can represent risks and opportunities that will impact a company's ability to create long-term value. This includes environmental issues like climate change and natural resource scarcity. It covers social issues like labor practices, product safety, and data security. And it involves governance matters that include board diversity, executive pay, and tax transparency.

ESG reporting is known by many names, including purpose-led reporting, sustainability reporting, corporate social responsibility reporting, and ESG risks and opportunities reporting. The market wants to know how companies are weighing risks and shaping business strategy in the context of ESG issues. Providing this information can help burnish a company's reputation, while withholding ESG information could potentially harm a company's valuation, access to capital, or its brand reputation in the market.

In short, ESG reporting is disclosure of material ESG risks and opportunities, from both a qualitative and quantitative perspective. It also includes explaining how and where those ESG risks and opportunities inform the company's business strategy.

90% of S&P 500 companies published sustainability reports in 2019

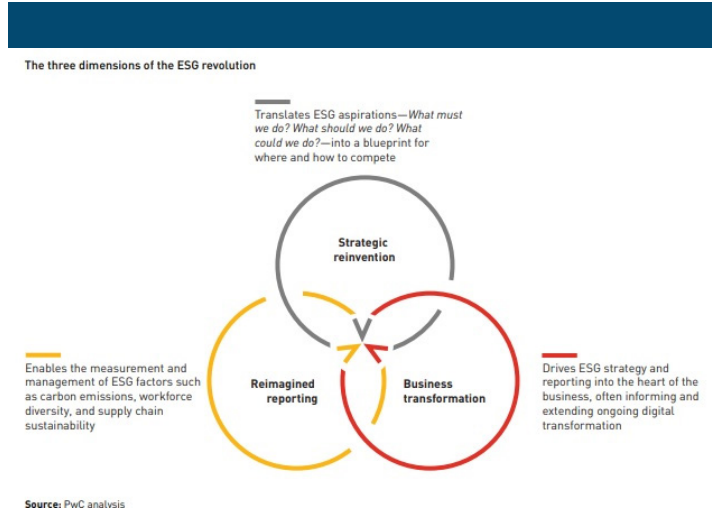

How to measure ESG?

The first step was to identify the measures that could contribute to significant emissions reductions. Then the utility created a governance and reporting structure that provides senior leadership with oversight and the ability to communicate progress toward the target. The company will be tracking activities through a series of milestones on the way to achieving the target over the next ten years. It now has a narrative that regulators and stakeholders can assess, and checkpoints along the way that help ensure it is on track.

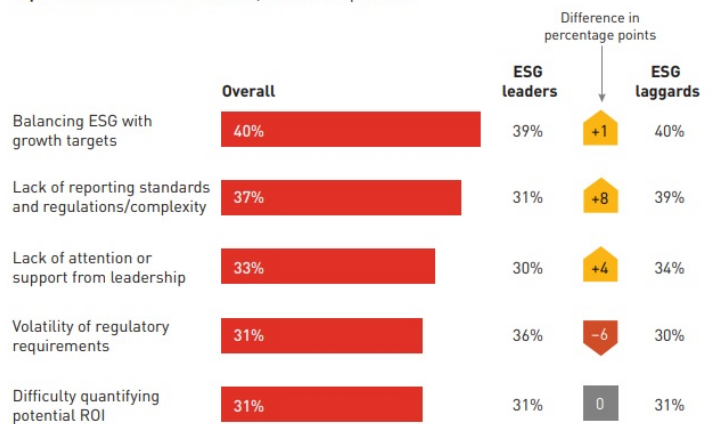

Those milestones build confidence to make decisions about capital expenditures, invest in training, and approach the capital markets in the future.

How are ESG challenges?

1. Companies are at different stages of tying the elements of ESG into their reporting and incorporating them into their broader strategy.
2. There's little clarity about how to use existing standards to tell a differentiated story.
3. Companies may not have the infrastructure to meet investor grade-reporting.
